We've delivered 11 new specialized High Clearance Vehicles to assist the NSW community in times of need!

High Clearance Vehicles (HCV's) are designed to operate in extreme off-road conditions and through floodwaters up to 1.2 meters deep.

With the addition of the 11 new HCV's, NSW SES now has 20 in total. This doubles the fleet of vehicles available to help volunteers access isolated communities and perform critical rescues during flooding.

This boost to the fleet is part of the NSW Government's ongoing investment in the NSW SES, providing volunteers with the equipment they need to keep communities safe.

The HCV vehicles are being delivered to multiple flood and storm hotspots across the state including Broken Hill, Coffs Harbour, Dubbo, Forbes, Goulburn, Ku-ring-gai, Mid North Coast, Moruya, Murwillumbah, Tamworth and Wagga Wagga, and can be deployed out of area during severe weather events.

"I know they will make a real difference protecting communities and supporting our volunteers."
